PROFILE

Cloud Platform Engineer with 2+ years of experience designing, automating, and operating secure, scalable cloud platforms for enterprise SaaS applications. Specialized in AWS, Kubernetes (Amazon EKS), Terraform, GitOps, DevSecOps, and Site Reliability Engineering (SRE), with proven expertise in building production-grade CI/CD platforms, automating cloud infrastructure, implementing cloud-native security, enhancing observability, and improving platform reliability. Experienced in architecting highly available distributed systems while driving automation, operational excellence, and developer productivity.

SKILLS

- **Cloud Platform:** AWS (EC2, EKS, IAM, Route53, S3, RDS, CloudWatch, Lambda, OpenSearch, SES, NLB, GuardDuty, Global Accelerator)
- **Container Platform & IaC:** Kubernetes, Docker, Helm, Terraform
- **DevOps & CI/CD:** Jenkins, ArgoCD, GitOps, Linux(Amazon Linux, Ubuntu), Bash, Groovy, YAML, MySQL DBMS
- **AI - Assisted Engineering:** ChatGPT, Claude, Gemini, Amazon Q | AWS DevOps Agent | Prompt Engineering | AI-assisted Troubleshooting | AI-assisted Documentation
- **Observability & Security:** ELK Stack, CloudWatch, OpenSearch, Hashicorp Vault, IAM, OIDC

PROFESSIONAL EXPERIENCE

Wolken Software Pvt Ltd

12/2024 – Present | Bengaluru, India

Associate 1 - DevSecOps

Key Responsibilities & Achievements:

- Designed, provisioned, and managed highly available AWS infrastructure supporting enterprise SaaS applications across production and non-production **Amazon EKS** environments using **Infrastructure as Code (Terraform)**.
- Architected and implemented cloud-native platform services including **AWS GuardDuty Malware Protection** for scanning application file attachments and **AWS Global Accelerator** to optimize global traffic routing, reduce latency, and improve application availability.
- Implemented the application migration from Amazon EC2 to Amazon EKS and standardized Kubernetes deployments using **Docker** and **GitOps** practices to improve scalability and operational consistency.
- Automated customer onboarding, **database refreshes**, and operational workflows using **Bash** and **Python**, saving **10+ engineering hours per week**.
- Designed and maintained end-to-end Jenkins CI pipelines for Java, Node.js, Next.js, and Angular microservices, automating source checkout, build, unit testing, security validation, containerization, and deployment.
- Integrated DevSecOps security controls into CI pipelines using **SBOM generation**, **OWASP Dependency-Check**, and **Trivy image scanning** to detect vulnerabilities before production deployments.

- Designed and implemented **ArgoCD** as the GitOps-based Continuous Delivery platform, enabling application teams to perform controlled self-service deployments to Kubernetes clusters.
- Monitored platform reliability using Amazon **CloudWatch**, **ELK Stack**, **status.io** & **AWS DevOps agent**, ensuring proactive detection of infrastructure and application issues.
- Developed **Bash/Python automation** to generate alerts for application slowness, unhealthy microservices, and infrastructure anomalies, database slowness alerts, reducing manual monitoring effort.
- Executed and managed **production deployments** across Kubernetes (Amazon EKS) environments, performing **release validation**, **post-deployment health checks**, **rollback support**, and incident troubleshooting to ensure service reliability and minimal downtime.
- Supported production operations by performing **incident troubleshooting & management**, **root cause analysis (RCA)**, **release validation**, and reliability improvements while tracking service health against defined **SLIs/SLOs**.

Self-Employed

05/2024 – 11/2024 | Remote

Freelance - DevOps consultant

Key Responsibilities & Achievements:

- Delivered automation solutions using **Bash** and **Python**, reducing repetitive operational effort by **up to 70%**.
- Provisioned and managed AWS infrastructure using **Terraform** and **CloudFormation**, enabling scalable and repeatable deployments.
- Designed and optimized **Jenkins CI/CD pipelines**, improving deployment efficiency and release reliability.
- Supported Docker and Kubernetes based application deployments across multiple environments.
- Applied DevOps best practices to improve automation, system stability, and operational workflows.

Viatrix

10/2022 – 05/2024 | Bengaluru, India

Senior Associate - Quality

- Performed quality analysis and ensured compliance with regulatory standards.

CERTIFICATES

Post Graduate Certification in Cloud Computing & DevOps, IIT - Roorkee (Feb 2023 – Mar 2024)

- Completed an intensive, industry-aligned online program covering end-to-end cloud and DevOps practices, including AWS, Terraform, CI/CD, Docker, and Kubernetes, with hands-on projects focused on real-world implementations.
- Credential ID: IPTIH2403200

EDUCATION

Dayananda Sagar University

2020 – 2022 | Bengaluru, India

Master's In Biochemistry

LANGUAGES

English | Kannada | Hindi

INTERESTS

Carnatic Classical Music - Vocal | Portrait Sketching | Interest on latest Technologies
